SCMR/ISMRM Co-Provided Workshop

Presented by the SCMR and the ISMRM Cardiac MR Study Group

Quantitative CMR: From Technique Development to Practical Implementation

January 27-28, 2016

Hyatt Regency Century Plaza | Los Angeles, California

Letter from Organizers

Dear Colleagues and Friends,

On behalf of the Organizing Committee, we are extremely happy to welcome you to Los Angeles for the 2016 Co-Provided SCMR/ISMRM Workshop entitled: Quantitative CMR: From Technique Development to Practical Implementation. This workshop is the 5th of its kind, and we hope that this continuing collaboration enhances both research and education in Cardiovascular Magnetic Resonance (CMR). We're pleased to have been given the opportunity to construct this year's program and are excited by the excellent speakers that have agreed to participate. We hope that the workshop will provoke many interesting, insightful and educational discussions.

The purpose of this workshop is to bring together basic and clinical researchers to discuss the wide range of Quantitative CMR Techniques and where they all stand in terms of their application in clinical research and/or clinical practice. A major strength of CMR lies in its ability to non-invasively provide quantitative measures of many different parameters. There are, however, still many challenges requiring improvements to the methods of acquisition and analysis, which can only be overcome by a collaborative effort of scientists, engineers and clinicians. We have a diverse program which ranges from techniques far from clinical application to those used in routine practice and those used more for clinical research and trials. The methods of analysis and needs for standardization are also addressed. We are delighted to have a group of excellent speakers including both leaders and younger rising stars in the field. We believe that the multi-disciplinary faculty and range of topics will benefit all participants to advance the field of Quantitative CMR.

The scientific program of this one and a half day workshop includes three plenary lectures, five scientific sessions including four with abstract talks and one with a moderated panel discussion and a wine & cheese poster session/reception. Our plenary speakers and session chairs represent world leaders in quantitative CMR and the speakers will introduce and present broad overviews of the topics that will follow in the more focused sessions. On the first day the sessions will start with techniques that are furthest from clinical application and move through those methods used for clinical research to those now applied clinically. The idea is to get a feel of how far we are from clinical application and what needs to be done to improve those that are already applied. The second day will focus more on methods applied to clinical trials and on standardization to ensure consistency. We sincerely hope that this workshop will provide an exciting opportunity for all of us to learn about the standing and importance of and to explore new ideas and concepts for using Quantitative CMR. By continuing this exchange between clinicians and research scientists we will continue to develop and improve techniques to improve our understanding, early detection and treatment of cardiovascular diseases.

Thank you to all the presenters, organizers and attendees for their effort and support to make this a successful meeting.

Matthias Stuber, PhD and David Firmin, PhD
Co-Chairs, SCMR/ISMRM Co-Provided Workshop

General Information Overview

The purpose of this workshop is to bring together basic and clinical researchers to discuss the wide range of Quantitative Cardiovascular Magnetic Resonance (CMR) Techniques and where they all stand in terms of their application in clinical research and/or clinical practice. A major strength of CMR lies in its ability to non-invasively provide quantitative measures of many different parameters. There are, however, still many challenges requiring improvements to the methods of acquisition and analysis, which can only be overcome by a collaborative effort of scientists, engineers and clinicians. We have a diverse program which ranges from techniques far from clinical application to those used in routine practice and those used more for clinical research and trials. The methods of analysis and needs for standardization are also addressed. We are delighted to have a group of excellent speakers including both leaders and younger rising stars in the field. We believe that the multi-disciplinary faculty and range of topics will benefit all participants to advance the field of quantitative CMR.

Target Audience

The multidisciplinary faculty and broad target audience will provide a stimulating discussion relevant to cardiologists, radiologists, physicists, engineers, physiologists, trainees, and technologists.

Educational Objectives

Upon completing this workshop, participants should be able to:

- Recognize both the importance and the potential of MRI to quantify heart structure, function & metabolism.
- Distinguish between current and emerging approaches to quantitative CMR.
- Describe steps needed for successful translation.

Continuing Medical Education Credits

The Society for Cardiovascular Magnetic Resonance is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians.

The Society for Cardiovascular Magnetic Resonance designates this live activity for a maximum of *11 AMA PRA Category 1 Credits™*. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

Agenda

Day 1: Wednesday, January 27, 2016

8:30 am **Welcome**
Matthias Stuber, PhD (University of Lausanne)
David Firmin, PhD (Royal Brompton Hospital & Imperial College London)

8:35 am **Plenary 1: Quantitative Techniques on the Horizon**
Sebastian Kozerke, PhD (Institute for Biomedical Engineering University and ETH Zurich)
At the conclusion of this presentation, participants will be better able to:
- Describe the structure & function of the heart at different scales
- State the potential & challenges of quantitative imaging approaches
- Assess the potential value of microstructural and metabolic imaging and spectroscopy

9:00 am **Plenary 2: CMR Quantification in Clincal Research & Diagnosis**
Raymond Kwong, MD, MPH (Brigham and Women's Hospital)
At the conclusion of this presentation, participants will be better able to:
- Differentiate among the different methods used in clinical research and diagnosis
- Discuss the clinical importance of quantification to CMR
- Describe the strengths and weaknesses of the different methods

9:25 am **Q & A**

9:30 am – 10:00 am **Break**

10:00 am – 12:00 pm **Session 1 - Preclinical and Translational Techniques**
Moderators: Sonia Nielles-Vallespin (National Institutes of Health, USA), Damian Tyler (University of Oxford, UK)
At the conclusion of this presentation, participants will be better able to:
- Compare preclinical and translational techniques
- Discuss how far these techniques are from translation
- Describe how CMR can probe metabolism and microstructure

10:00 am **Cardiac Spectroscopy**
Michael Schär, PhD (Johns Hopkins University)

10:15 am **DNP**
Tyler Damian, PhD (University of Oxford)

10:30 am **cDTI**
Daniel Ennis, PhD (University of California Los Angeles)

10:45 am **Invited Abstract Presentations**

10:45 am **W 01 Cardiac MR Fingerprinting for T1 and T2 Mapping in Four Heartbeats**
Jesse Hamilton (Case Western Reserve University)

11:00 am **W 02 Fast, Heart-Rate Independent, Whole-Heart, Free-Breathing, Three-Dimensional Myocardial BOLD MRI at 3T with Simultaneous 13N-Ammonia PET Validation in Canines**
Hsin-Jung Yang (Cedars Sinai Medical Center)

11:15 am **W 03 Detection of Increased Coronary Microvascular Permeability with MRI T1 Mapping and Gadolinium-labeled Albumin**
Sophia Cui (University of Virginia)

11:30 am **W 04 Automated Removal of Gradient-Induced Voltages from 12-Lead ECG Traces during High-Gradient Duty-Cycle MRI Sequences**
Mikayel Dabaghyan, PhD (Mirtech, Inc.)

11:45 am **Panel Discussion**

12:00 pm – 1:00 pm **Lunch (On Own)**

1:00 pm – 3:00 pm **Session 2: Clinical Research Approaches**
Moderators: Allison Hays, MD (Johns Hopkins Hospital, USA) , Jenny Keegan, PhD (Royal Brompton Hospital, London, UK)
At the conclusion of this presentation, participants will be better able to:
- Explain how quantitative myocardial perfusion analysis is performed and the potential benefits for clinical and research studies
- Analyze the current and potential applications of 4D flow
- Describe approaches to the CMR assessment of diastolic dysfunction and the clinical and research applications of cardiac strain imaging

1:00 pm **Perfusion Quantification**
Andrew Arai, MD (National Institutes of Health)

1:15 pm **4D Flow**
Ann Bolger, MD (University of California San Francisco)

1:30 pm **Strain CMR: Techniques and Applications**
Fredrick Epstein, PhD (University of Virginia)

1:45 pm **Invited Abstract Presentations**

1:45 pm **W 05 Black-Blood T1 Mapping at 3T: Reduced Partial-Voluming using Adiabatic MSDE Preparation**
Sebastian Weingaertner, PhD (Computer Assisted Clinical Medicine)

2:00 pm **W 06 An Efficient Fat Suppression Technique for Stimulated-Echo Based CMR**
El-Sayed Ibrahim, PhD (University of Michigan)

2:15 pm **W 07 Characterization of Both Myocardial Extracellular Volume Expansion and Myocyte Mypertrophy by CMR Detect Early Signs of Myocardial Tissue Remodeling in Friedreich's Ataxia Patients without Heart Failure**
Otavio Coelho-Filho, MD, MPH, PhD (State University of Campinas – UNICAMP)

2:30 pm **W 08 Inline Quantitative Myocardial Perfusion Flow Mapping**
Hui Xue, PhD (National Institutes of Health)

2:45 pm **Panel Discussion**

3:00 pm – 3:30 pm **Break**

3:30 pm – 5:00 pm **Session 3: Techniques Used in Routine Practice**
Moderators: Philipp Beerbaum, MD (Hannover Medical University, Germany), Jonathan Weinsaft, MD (Cornell University, USA)
At the conclusion of this presentation, participants will be better able to:
- Summarize a comprehensive overview of quantification in routine CMR
- Describe the strengths and weaknesses of the different measurements
- Discuss the limitations of quantitative CMR in routine practice

3:30 pm **Left and Right Ventricular Function**
Andreas Schuster, MD, PhD (University of Gottingen, Germany)

Wednesday, January 27, 2016 (Cont'd)

3:45 pm **2D Flow/Velocity Measurement & Valves**
Vanessa Ferreira, MD, DPhil (University of Oxford)

4:00 pm **Myocardial LGE Quantification**
Igor Klem, MD (Duke University Medical Center)

4:15 pm **Myocardial T1, T2 and T2* Quantification**
Michael Jerosch-Herold, PhD (Brigham and Women's Hospital, Harvard Medical School)

4:30 pm **Invited Abstract Presentations**

4:30 pm **W 09 A Novel Analytical Approach to Quantitative Myocardial Edema Imaging in Acute Myocarditis Using T2-Mapping**
Bettina Baessler, MD (University Hospital of Cologne)

4:45 pm **W 10 In-Vivo Carotid T2 Mapping Can Accurately Quantify Plaque Lipid Content to Discriminate between Symptomatic and Asymptomatic Patients: Histological Validation, Scan-Rescan Reproducibility and Clinical Study**
Luca Biasiolli (University of Oxford)

5:00 pm **W 11 A Preliminary Investigation towards Automated Computation of Multiparametric Strain Z-Score in Dilated Cardiomyopathy Using Navigator-gated Spiral DENSE MRI and Radial Point Interpolation Method**
Julia Kar, PhD (Washington University)

5:15 pm **Panel Discussion**

5:30 pm **Poster Session and Reception**

Day 2: Thursday, January 28, 2016

8:30 am **Welcome**
Matthias Stuber, PhD (University of Lausanne)
David Firmin, PhD (Royal Brompton Hospital & Imperial College London)

8:35 am **Plenary 3: Quantification in Trials, Analysis & Standardisation**
Sven Plein, MD, PhD (University of Leeds)
At the conclusion of this presentation, participants will be better able to:

- Indicate the importance of quantitative endpoints in clinical trials
- List the challenges of defining quantitative endpoints for trials including standardisation
- Compare the value of MRI relative to other endpoints in clinical trials

9:00 am – 11:00 am **Session 4 - Quantitative CMR Methods in Trials of Medical Intervention**
Moderators: Marcus Carlsson (Lund University, Sweden), Sam Nazarian (Johns Hopkins University, USA)
At the conclusion of this presentation, participants will be better able to:

- Discuss the pathophysiology and prognostic implications of area at risk, salvage, microvascular obstruction and hemorrhage in myocardial infarction
- Quantify these measures using CMR and understand the benefits and caveats of these measures and have an insight into how they have been used in randomized controlled clinical trials
- Describe how CMR can contribute to interventional electrophysiology trials

9:00 am **AAR and Salvage**
Henrik Engblom, MD, PhD (Lund University)

9:15 am **Microvascular Obstruction and Hemorrhage**
Ingo Eitel, MD (University of Leipzig)

9:30 am **CMR Parameters to Guide EP Interventions**
Graham Wright, PhD (University of Toronto)

9:45 am **Invited Abstract Presentations**

9:45 am **W 12 Two RR Myocardial Perfusion Acquisition Achieves Unbiased Myocardial Blood Flow (MBF) Estimates**
Hui Xue, PhD (National Institutes of Health)

10:00 am **W 13 Assessment of T1Rho Relaxation Times after Reperfused Myocardial Infarction**
Walter Witschey, PhD (University of Pennsylvania)

10:15 am **W 14 A T1 and ECV Phantom for Global T1 Mapping Quality Assurance: The T1 Mapping and ECV Standardisation in CMR (T1MES) Program**
Gaby Captur, MD, MRCP (UCL Institute of Cardiovascular Science, University College London, Barts Heart Centre. St Bartholomew's Hospital)

10:25 am **W 15 Pressure Gradient Measurement Using Phase Contrast (PC)-MRI in Stenotic Phantom Models: Towards Noninvasive Quantification of Fractional Flow Reserve in the Coronary Arteries**
Zixin Deng, MS (Cedars Sinai Medical Center, University of California, Los Angeles)

10:45 am **Panel Discussion**

11:00 am – 11:30 am **Refreshment Break**

11:30 am – 12:45 pm **Session 5 - Quantitative CMR Analysis and Standardization**
Moderators: Michael Salerno, MD, PhD (University of Virginia, USA), Mark Hofman, PhD (VU University Medical Center)
At the conclusion of this presentation, participants will be better able to:

- Explain the importance of phantoms and comparable analysis algorithms to perform clinical multi-centre studies
- Recognize the need for physical standards (phantoms) for traceability of cross-platform measurements
- Explain the need for comparative studies of different analysis algorithms using common datasets

11:30 am **Clinical Need for Standards in CMR-Acquisition and Data Analysis**
Jenette Schulz-Menger, MD (Charite Universitatsmedizin Berlin and HELIOS-Clinics)

11:45 am **Developing Standards with National Institutes**
Katy Keenan (National Institute of Standards and Technology)

12:00 pm **Comparability of Data Analysis Algorithms**
Alistair Young, PhD (Auckland University)

12:15 pm **Moderated Panel Discussion**

12:45 pm **Adjourn**

Program Committee and Faculty Disclosures

The SCMR and ISMRM are committed to:

- Ensuring balance, independence, objectivity and scientific rigor in all Continuing Medical Education (CME) programs; and
- Presenting CME activities that promote improvements or quality in healthcare and are independent of commercial interests.

Therefore it is the policy of both societies that any person who has influence over the content of a program designated for *AMA PRA Category 1 Credits™* must disclose any real or apparent financial interest or other relationship (i.e., grants, research support, consultant, honoraria) that the individual may have with the manufacturers, distributors or providers of any commercial products or services that may be discussed in the presentation.

Such financial interests or relationships must be identified in advance so that potential conflicts can be resolved before the program, and participants at the CME activity may have these facts fully disclosed at the outset.

Neither the ISMRM nor the SCMR implies that such financial interests or relationships are inherently improper or that such interests or relationships would prevent the speaker or organizer from making an objective contribution. However, it is imperative that such financial interests or relationships be identified so that potential conflicts can be resolved before the program, and participants at the CME activity may have these facts fully disclosed in advance. It then remains for the audience to determine whether an individual's outside interests may reflect a possible bias in either the exposition or the conclusions presented.
